# Package 'DSI'

May 18, 2020

```
Type Package
Title 'DataSHIELD' Interface
Version 1.1.0
Description 'DataSHIELD' is an infrastructure and series of R packages that
     enables the remote and 'non-disclosive' analysis of sensitive research data.
     This package defines the API that is to be implemented by 'DataSHIELD' compliant
     data repositories.
Depends R (i = 3.1),
     methods,
     progress,
     R6
Suggests testthat (i = 2.1.0)

datashield.aggregate Data aggregation

## Description

Aggregates the expression result using the specified aggregation method in the current Datashield session.

## Usage

```
datashield.aggregate(conns, expr, async = TRUE)
```

## Arguments

conns DSConnection-class object or a list of DSConnection-classs.

expr Expression to evaluate.

async Whether the result of the call should be retrieved asynchronously. When

TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.

## Value

The result of the aggregation

```
## Not run:
# call aggregate function on server side
datashield.aggregate(conns, expr = quote(someFunction(D, 123)))
## End(Not run)
```

4 datashield.assign

datashield.assign Data assignment

## Description

Assign a table or an expression result to a R symbol in the Datashield R session.

## Usage

```
datashield.assign(
  conns,
  symbol,
  value,
  variables = NULL,
  missings = FALSE,
  identifiers = NULL,
  id.name = NULL,
  async = TRUE
)
```

#### Arguments

conns DSConnection-class object or a list of DSConnection-classs.

symbol Name of the R symbol.

value Fully qualified name of a table reference in data repositories (see datashield.assign.table

for more details) or a R expression with allowed assign functions calls.

variables List of variable names or Javascript expression that selects the variables

of a table (ignored if value does not refere to a table). See javascript documentation: http://opaldoc.obiba.org/en/latest/magma-user-guide/

variable/

missings If TRUE, missing values will be pushed from data repository to R, default

is FALSE. Ignored if value is an R expression.

identifiers Name of the identifiers mapping to use when assigning entities to R (if

supported by data repository).

id.name Name of the column that will contain the entity identifiers. If not spec-

ified, the identifiers will be the data frame row names. When specified

this column can be used to perform joins between data frames.

async Whether the result of the call should be retrieved asynchronously (TRUE

means that calls are parallelized over the connections, when the connec-

tion supports that feature, with an extra overhead of requests).

```
## Not run:
# assign a list of variables from table HOP
```

datashield.assign.expr 5

```
datashield.assign(conn, symbol="D", value="demo.HOP",
  variables=list("GENDER","LAB_GLUC"))

# assign all the variables matching 'LAB' from table HOP
datashield.assign(conn, symbol="D", value="demo.HOP",
  variables="name().matches('LAB_')")

## End(Not run)
```

datashield.assign.expr

 $Expression\ result\ assignment$ 

#### Description

Assign the result of the execution of an expression to a R symbol in the Datashield R session.

## Usage

```
datashield.assign.expr(conns, symbol, expr, async = TRUE)
```

#### Arguments

conns DSConnection-class object or a list of DSConnection-classs.

symbol Name of the R symbol.

expr R expression with allowed assign functions calls.

async Whether the result of the call should be retrieved asynchronously. When

TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.

```
## Not run:
# assign a G symbol
datashield.assign.expr(conns, symbol = "G", expr = quote(as.numeric(D$GENDER)))
## End(Not run)
```

#### datashield.assign.resource

Resource assignment

#### Description

Assign a resource object of class 'ResourceClient' to a R symbol in the Datashield R session.

## Usage

```
datashield.assign.resource(conns, symbol, resource, async = TRUE)
```

## Arguments

conns DSConnection-class object or a list of DSConnection-classs.

symbol Name of the R symbol.

resource Fully qualified name of a resource reference in the data repository (can

be a vector or must be the same in each data repository); or a named list of fully qualified resource names (one per server name); or a data frame with 'server' and 'resource' columns (such as the one that is used

in datashield.login)

async Whether the result of the call should be retrieved asynchronously. When

TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.

```
## Not run:
# assign a resource HOP
datashield.assign.resource(conn, symbol="rsrc", resource="demo.HOP")

# assign the tables that are defined in the logindata ('server' and 'resource' columns are
# expected) data frame that is used in datashield.login() function. Connections names
# and server names must match.
datashield.assign.resource(conns, "rsrc", logindata)

# assign the resources that are defined in the provided named list. Connections names
# and server names must match.
datashield.assign.resource(conns, "rsrc",
    list(server1="datashield.CNSIM1", server2="datashield.CNSIM2"))

## End(Not run)
```

```
datashield.assign.table
```

 $Table\ assignment$ 

## Description

Assign a table to a R symbol in the Datashield R session.

## Usage

```
datashield.assign.table(
  conns,
  symbol,
  table,
  variables = NULL,
  missings = FALSE,
  identifiers = NULL,
  id.name = NULL,
  async = TRUE
)
```

## Arguments

conns	DSConnection-class object or a list of DSConnection-classs.
symbol	Name of the R symbol.
table	Fully qualified name of a table in the data repository (can be a vector or must be the same in each data repository); or a named list of fully qualified table names (one per server name); or a data frame with 'server' and 'table' columns (such as the one that is used in datashield.login)
variables	List of variable names or Javascript expression that selects the variables of a table. See javascript documentation: http://opaldoc.obiba.org/en/latest/magma-user-guide/variable/
missings	If TRUE, missing values will be pushed from data repository to R, default is FALSE. Ignored if value is an R expression.
identifiers	Name of the identifiers mapping to use when assigning entities to R (if supported by the data repository).
id.name	Name of the column that will contain the entity identifiers. If not specified, the identifiers will be the data frame row names. When specified this column can be used to perform joins between data frames.
async	Whether the result of the call should be retrieved asynchronously. When TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.

8 datashield.connections

#### Examples

```
## Not run:
# assign a list of variables from table HOP
datashield.assign.table(conn, symbol="D", table="demo.HOP",
    variables=list("GENDER","LAB_GLUC"))

# assign all the variables matching 'LAB' from table HOP
datashield.assign.table(conn, symbol="D", table="demo.HOP",
    variables="name().matches('LAB_')")

# assign the tables that are defined in the logindata ('server' and 'table' columns are
# expected) data frame that is used in datashield.login() function. Connections names
# and server names must match.
datashield.assign.table(conns, "D", logindata)

# assign the tables that are defined in the provided named list. Connections names
# and server names must match.
datashield.assign.table(conns, "D", list(server1="datashield.CNSIM1", server2="datashield.CNSIM2"))
## End(Not run)
```

datashield.connections

List the DSConnection objects in the analytic environment

## Description

This function identifies and prints all DSConnection-class objects in the analytic environment. If there are no DSConnection servers in the analytic environment datashield.connections reminds the user that they have to login to a valid set of DataSHIELD aware servers. If there is only one set of DSConnections, it copies that one set and names the copy 'default.connections'. This default set will then be used by default by all subsequent calls to client-side functions. If there is more than one set of DSConnections in the analytic environment, datashield.connections tells the user that they can either explicitly specify the DSConnections to be used by each client-side function by providing an explicit "datasources=" argument for each call, or can alternatively use the datashield.connections\_default function to specify a default set of DSConnections to be used by all client-side calls unless over-ruled by the 'datasources=' argument.

## Usage

```
datashield.connections(env = getOption("datashield.env", globalenv()))
```

#### Arguments

env

The environment where to search for the connection symbols. Try to get it from the 'datashield.env' option, with default to the Global Environment.

#### Value

Returns a list of DSConnection-class objects and advises the user how best to respond depending whether there are zero, one or multiple connections detected.

#### See Also

Other Connections management: datashield.connections\_default(), datashield.connections\_find()

#### datashield.connections\_default

Set or get the default list of DSConnection objects in the analytic environment

#### Description

By default if there is only one set of DSConnection-class objects that is available for analysis, all DataSHIELD client-side functions will use that full set of DSConnections unless the 'datasources=' argument has been set and specifies that a particular subset of those DSConnections should be used instead. The correct identification of the full single set of opals is based on the datashield.connections\_find function. To illustrate, if the single set of Opals is called 'study.opals' and consists of six servers numbered studies[1] to studies[6] then all client-side functions will use data from all six of these 'studies' unless, say, datasources=studies[c(2,5)] is declared and only data from the second and fifth studies will then be used. On the other hand, if there is more than one set of DSConnections in the analytic environment client-side functions will be unable to determine which set to use. The function datashield connections find has therefore been written so that if one of the DSConnection sets is called 'default.connections' then that set - i.e. 'default.connections' - will be selected by default by all DataSHIELD client-side functions. If there is more than one set of DSConnections in the analytic environment and NONE of these is called 'default.connections', the function datashield.connections\_find will fail. Therefore datashield.connections\_default copies the provided set of DSConnections as 'default.connections'. This set will then be selected by default by all client-side functions, unless it is deleted and an alternative set of DSConnections is copied and named 'default.connections'. Regardless how many sets of DSConnections exist and regardless whether any of them may be called 'default.connections', the 'datasources=' argument overrides the defaults and allows the user to base his/her analysis on any set of DSConnections and any subset of those DSConnections.

## Usage

```
datashield.connections_default(
  name = NULL,
  env = getOption("datashield.env", globalenv())
)
```

#### Arguments

name Symbol name that identifies the set of DSConnection-class objects to be

used by default. If not provided, the 'default.connections' variable value

is returned.

env The environment where to search for the connection symbols. Try to get it

from the 'datashield.env' option, with default to the Global Environment.

#### Value

The 'default.connections' value from the analytic environment or NULL if the 'default.connections' symbol is not defined.

#### See Also

Other Connections management: datashield.connections\_find(), datashield.connections()

datashield.connections\_find

Search for DSConnection objects in the analytic environment

#### Description

If the user does not set the argument 'datasources' in the client side analysis functions, this function is called to search for DSConnection-class objects in the environment (default environment is the Global one). If one set of DSConnection objects is found, it is assigned to 'default.connections' symbol in the analytic environment. If more than one set of DSConnection objects is found and none of them is called 'default.connections', the function stops and suggests user to use the datashield.connections\_default function.

## Usage

```
datashield.connections_find(env = getOption("datashield.env", globalenv()))
```

## Arguments

env The environment where to search for the connection symbols. Try to get it

from the 'datashield.env' option, with default to the Global Environment.

#### Value

Returns a list of DSConnection-class objects or stops the process

#### See Also

Other Connections management: datashield.connections\_default(), datashield.connections()

datashield.errors 11

datashield.errors

List R last errors

## Description

Get the R last errors available after the datashield.assign or datashield.aggregate calls in the Datashield R session.

## Usage

```
datashield.errors()
```

datashield.login

 $\label{logs} \textit{Logs in a DataSHIELD R sessions and optionaly assigns variables to } R$ 

## Description

This function allows for clients to login to data repository servers and (optionaly) assign all the data or specific variables from the data repositories tables to R data frames. The assigned dataframes (one for each data repository) are named 'D' (by default). Different login strategies are supported: using a certificate/private key pair (2-way SSL encryption mechanism), using user credentials (user name and password) or using a personal access token (could be combined with a user name, depending on the data repository system).

## Usage

```
datashield.login(
  logins = NULL,
  assign = FALSE,
  variables = NULL,
  missings = FALSE,
  symbol = "D",
  id.name = NULL,
  opts = getOption("datashield.opts", list()),
  restore = NULL
)
```

## Arguments

logins

A dataframe table that holds login details. This table holds five elements required to login to the servers where the data to analyse is stored. The expected column names are 'driver' (the DSDriver-class name, default is "OpalDriver"), 'server' (the server name), url' (the server url), 'user' (the user name or the certificate PEM file path), 'password' (the user password or the private key PEM file path), 'token' (the personal access

12 datashield.login

token, ignored if 'user' is defined), 'table' (the fully qualified name of the table in the data repository), 'resource' (the fully qualified name of the resource reference in the data repository), 'options' (the SSL options). An additional column 'identifiers' can be specified for identifiers mapping (if supported by data repository). See also the documentation of the examplar input table logindata for details of the login elements.

assign A boolean which tells whether or not data should be assigned from the

data repository table to R after login into the server(s).

variables Specific variables to assign. If assign is set to FALSE this argument is

ignored otherwise the specified variables are assigned to R. If no variables are specified (default) the whole data repository's table is assigned.

missings If TRUE, missing values will be pushed from data repository to R, default

is FALSE.

symbol A character, the name of the data frame to which the data repository's

table will be assigned after login into the server(s).

id. name Name of the column that will contain the entity identifiers. If not spec-

ified, the identifiers will be the data frame row names. When specified

this column can be used to perform joins between data frames.

opts Default SSL options to be used in case it is not specified in the logins

structure.

restore The workspace name to restore (optional).

#### Value

object(s) of class DSConnection

```
## Not run:
#### The below examples illustrate an analysises that use test/simulated data ####
# build your data.frame
builder <- newDSLoginBuilder()</pre>
builder$append(server="server1", url="https://opal-demo.obiba.org",
               table = "datashield.CNSIM1", \ resource = "datashield.CNSIM1",
               user="dsuser", password="password",
               options="list(ssl_verifyhost=0,ssl_verifypeer=0)")
builder$append(server="server2", url="dslite.server",
               table="CNSIM2", resource="CNSIM2r", driver="DSLiteDriver")
builder$append(server="server3", url="https://molgenis.example.org",
          table="CNSIM3", resource="CNSIM3r", token="123456789", driver="MolgenisDriver")
builder$append(server="server4", url="dslite.server",
               table="CNSIM4", resource="CNSIM4r", driver="DSLiteDriver")
logindata <- builder$build()</pre>
# or load the data.frame that contains the login details
data(logindata)
```

datashield.logout 13

```
# Example 1: just login (default)
connections <- datashield.login(logins=logindata)</pre>
# Example 2: login and assign the whole dataset
connections <- datashield.login(logins=logindata, assign=TRUE)</pre>
# Example 3: login and assign specific variable(s)
myvar <- list("LAB_TSC")</pre>
connections <- datashield.login(logins=logindata, assign=TRUE, variables=myvar)</pre>
# note that the asignment information can also be provided afterwards
builder <- newDSLoginBuilder()</pre>
builder$append(server="server1", url="https://opal-demo.obiba.org",
               user="dsuser", password="password")
builder$append(server="server2", url="https://opal-test.obiba.org",
               token="123456789")
logindata <- builder$build()</pre>
connections <- datashield.login(logins=logindata)</pre>
datashield.assign.table(connections, symbol = "D",
                         table = list(server1 = "CNSIM.CNSIM1",
                                       server2 = "CNSIM.CNSIM2"))
datashield.assign.resource(connections, symbol = "rsrc",
                            table = list(server1 = "res.CNSIM1",
                                          server2 = "res.CNSIM2"))
## End(Not run)
```

datashield.logout

Logout from DataSHIELD R sessions

## Description

Clear the Datashield R sessions and logout from DataSHIELD data repositories.

## Usage

```
datashield.logout(conns, save = NULL)
```

#### **Arguments**

 ${\tt Conns} \qquad \qquad {\tt DSConnection-class} \ object \ or \ a \ list \ of \ {\tt DSConnection-classs}.$ 

save Save datashield sessions on each DataSHIELD data repository (if feature

is supported) with provided ID (must be a character string).

datashield.methods

 $List\ of\ DataSHIELD\ methods$ 

## Description

Get the list of all the DataSHIELD methods from the different data repositories.

## Usage

```
datashield.methods(conns, type = "aggregate")
```

## Arguments

conns DSConnection-class object or a list of DSConnection-classs.

type Type of the method: "aggregate" (default) or "assign".

#### Value

Methods details from all the servers.

#### datashield.method\_status

Status of the DataSHIELD methods

## Description

Get the status of the DataSHIELD methods in the different data repositories to check if any method is missing.

## Usage

```
datashield.method_status(conns, type = "aggregate")
```

## Arguments

conns DSConnection-class object or a list of DSConnection-classs.

type Type of the method: "aggregate" (default) or "assign".

#### Value

Methods availability on each server.

datashield.pkg\_check 15

datashield.pkg\_check

Check server-side package minimum version

## Description

Check for each of the server, accessible through provided  ${\tt DSConnection-class}$  objects, whether the installed

## Usage

```
datashield.pkg_check(
  conns,
  name,
  version,
  env = getOption("datashield.env", globalenv())
)
```

#### Arguments

conns DSConnection-class object or a list of DSConnection-classs.

name The name of the server-side package.

version The minimum package version number to be matched.

env Environment where the package status result should be cached. Try to

get it from the 'datashield.env' option, with default to the Global Envi-

ronment.

 $datashield.pkg\_status$  Status of the DataSHIELD packages

## Description

Get the status of the DataSHIELD packages in the different data repositories to check if any package is missing.

## Usage

```
datashield.pkg_status(conns)
```

#### Arguments

conns DSConnection-cl

DSConnection-class object or a list of DSConnection-classs.

#### Value

Packages status for each server.

datashield.resources List of the resources

## Description

Get the list of all the resources from the different data repositories.

## Usage

```
datashield.resources(conns)
```

#### Arguments

conns

DSConnection-class object or a list of DSConnection-classs.

#### Value

Resource unique names from all the servers.

#### Examples

```
## Not run:
  datashield.resources(conns)
## End(Not run)
```

datashield.resource\_status

Status of some resources

## Description

Get whether some identified resources are accessible in each of the data repositories.

## Usage

```
datashield.resource_status(conns, resource)
```

## Arguments

conns DSConnection-class object or a list of DSConnection-classs.

resource Fully qualified name of a resource in the data repository (can be a vector or

must be the same in each data repository); or a named list of fully qualified resource names (one per server name); or a data frame with 'server' and 'resource' columns (such as the one that is used in datashield.login)

#### Value

Resource status for each server.

datashield.rm 17

datashield.rm

Remove a R symbol

## Description

Remove a symbol from the current Datashield session.

## Usage

```
datashield.rm(conns, symbol)
```

## Arguments

conns DSConnection-class object or a list of DSConnection-classs.

symbol Name of the R symbol.

datashield.symbols  $List \ R \ symbols$ 

## Description

Get the R symbols available after the datashield assign calls in the Datashield R session.

## Usage

```
datashield.symbols(conns)
```

## Arguments

conns

DSConnection-class object or a list of DSConnection-classs.

datashield.tables

List of the tables

## Description

Get the list of all the tables from the different data repositories.

## Usage

```
datashield.tables(conns)
```

## Arguments

conns

DSConnection-class object or a list of DSConnection-classs.

#### Value

Table unique names from all the servers.

## Examples

```
## Not run:
   datashield.tables(conns)
## End(Not run)
```

datashield.table\_status

Status of some tables

## Description

Get whether some identified tables are accessible in each of the data repositories.

## Usage

```
datashield.table_status(conns, table)
```

#### **Arguments**

conns

DSConnection-class object or a list of DSConnection-classs.

table

Fully qualified name of a table in the data repository (can be a vector or must be the same in each data repository); or a named list of fully qualified table names (one per server name); or a data frame with 'server' and 'table' columns (such as the one that is used in datashield.login)

#### Value

Table status for each server.

 ${\tt datashield.workspaces}$   ${\tt List~saved~DataSHIELD~R~workspaces}$ 

#### Description

Get the list of R workspaces that were saved during a Datashield R session.

#### Usage

```
datashield.workspaces(conns)
```

#### **Arguments**

conns

DSConnection-class object or a list of DSConnection-classs.

datashield.workspace\_rm

 $Remove\ a\ Data SHIELD\ work space$ 

## Description

Remove in each data repository the workspace with the provided name.

## Usage

```
datashield.workspace_rm(conns, ws)
```

## Arguments

conns DSConnection-class object or a list of DSConnection-classs.

ws The workspace name

datashield.workspace\_save

Save DataSHIELD R session to a workspace

## Description

Save the current state of the DataSHIELD R session in a workspace with the provided name in each data repository. The workspace can be restored on the next datashield.login.

## Usage

```
datashield.workspace_save(conns, ws)
```

#### Arguments

conns DSConnection-class object or a list of DSConnection-classs.

ws The workspace name

20 dsAssignExpr

dsAggregate	$Aggregate\ data$	
-------------	-------------------	--

#### Description

Aggregate some data from the DataSHIELD R session using a valid R expression. The aggregation expression must satisfy the data repository's DataSHIELD configuration.

## Usage

```
dsAggregate(conn, expr, async = TRUE)
```

## Arguments

conn An object that inherits from DSConnection-class.

expr Expression to evaluate.

async Whether the result of the call should be retrieved asynchronously. When

TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.

#### See Also

```
Other DSConnection generics: DSConnection-class, dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()
```

## Examples

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsAssignTable(con, "D", "test.CNSIM")
dsAggregate(con, as.symbol("meanDS(D$WEIGHT)"))
dsDisconnect(con)
## End(Not run)</pre>
```

dsAssignExpr

Assign an expression result

#### Description

Assign the result of the evaluation of an expression to a symbol the DataSHIELD R session. The assignment expression must satisfy the data repository's DataSHIELD configuration.

dsAssignResource 21

#### Usage

```
dsAssignExpr(conn, symbol, expr, async = TRUE)
```

#### Arguments

conn An object that inherits from DSConnection-class.

symbol Name of the R symbol.

expr A R expression with allowed assign functions calls.

async Whether the result of the call should be retrieved asynchronously. When

TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()
```

## Examples

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsAssignExpr(con, "C", as.symbol("c(1, 2, 3)"))
dsDisconnect(con)
## End(Not run)</pre>
```

dsAssignResource

Assign a resource object

## Description

Assign a resource object of class 'ResourceClient' from the data repository to a symbol in the DataSHIELD R session. The resource reference to be assigned must exist (i.e. proper permissions apply) for the DataSHIELD user.

#### Usage

```
dsAssignResource(conn, symbol, resource, async = TRUE)
```

22 ds Assign Table

#### Arguments

conn An object that inherits from DSConnection-class.

symbol Name of the R symbol.

resource Fully qualified name of a resource reference in the data repository.

async Whether the result of the call should be retrieved asynchronously. When

TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.

#### See Also

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()
```

#### Examples

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsAssignResource(con, "D", "test.CNSIM")
dsDisconnect(con)
## End(Not run)</pre>
```

 ${\sf dsAssignTable}$ 

Assign a data table

## Description

Assign a data table from the data repository to a symbol in the DataSHIELD R session. The table to be assigned must exist (i.e. proper permissions apply) for the DataSHIELD user.

#### Usage

```
dsAssignTable(
  conn,
  symbol,
  table,
  variables = NULL,
  missings = FALSE,
  identifiers = NULL,
  id.name = NULL,
  async = TRUE
)
```

dsConnect 23

#### Arguments

conn An object that inherits from DSConnection-class.

symbol Name of the R symbol.

table Fully qualified name of a table in the data repository.

variables List of variable names or Javascript expression that selects the variables

of a table. See javascript documentation: http://opaldoc.obiba.org/

en/latest/magma-user-guide/variable/

missings If TRUE, missing values will be pushed from data repository to R, default

is FALSE.

identifiers Name of the identifiers mapping to use when assigning entities to R (if

supported by the data repository).

id.name Name of the column that will contain the entity identifiers. If not spec-

ified, the identifiers will be the data frame row names. When specified

this column can be used to perform joins between data frames.

async Whether the result of the call should be retrieved asynchronously. When

TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.

#### See Also

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()
```

## Examples

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsAssignTable(con, "D", "test.CNSIM")
dsDisconnect(con)
## End(Not run)</pre>
```

dsConnect

Create a connection to a DataSHIELD-aware data repository

#### Description

Connect to a data repository going through the appropriate authentication procedure. Some implementations may allow you to have multiple connections open, so you may invoke this function repeatedly assigning its output to different objects. The authentication mechanism is left unspecified, so check the documentation of individual drivers for details.

24 DSConnection-class

#### Usage

```
dsConnect(drv, name, restore = NULL, ...)
```

#### Arguments

drv an object that inherits from DSDriver-class.

name Name of the connection, which must be unique among all the DataSHIELD

connections.

restore Workspace name to be restored in the newly created DataSHIELD R

session

... authentication arguments needed by the data repository instance; these

typically include 'username', 'password', 'token', 'host', 'port', 'dbname',

etc. For details see the appropriate 'DSDriver'.

#### See Also

```
dsDisconnect to disconnect from a data repository.
```

Other DSDriver generics: DSDriver-class, dsGetInfo()

## Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1", "username", "password", "https://opal.example.org")
con
dsListTables(con)
dsDisconnect(con)
## End(Not run)</pre>
```

DSConnection-class

DSConnection class

## Description

This virtual class encapsulates the connection to a DataSHIELD-aware data repository, and it provides access to data assignments and aggregations etc.

#### Implementation note

Individual drivers are free to implement single or multiple simultaneous connections.

#### See Also

```
Other DS classes: DSDriver-class, DSObject-class, DSResult-class
Other DSConnection generics: dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()
```

dsDisconnect 25

## Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1", "username", "password", "https://opal.example.org")
con
dsDisconnect(con)
## End(Not run)</pre>
```

dsDisconnect

Disconnect (close) a connection

#### Description

This closes the connection, discards all pending work, and frees resources (e.g., memory, sockets).

## Usage

```
dsDisconnect(conn, save = NULL)
```

## Arguments

conn An object inheriting from DSConnection-class.

save Save DataSHIELD session in data repository with provided identifier

string.

## See Also

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()
```

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsDisconnect(con)
## End(Not run)</pre>
```

26 dsFetch

DSDriver-class

DSDriver class

## Description

Base class for all DataSHIELD-aware data repositories drivers (e.g., Opal, ...). The virtual class 'DSDriver' defines the operations for creating connections.

#### See Also

```
Other DS classes: DSConnection-class, DSObject-class, DSResult-class
Other DSDriver generics: dsConnect(), dsGetInfo()
```

dsFetch

Get the raw result

## Description

Wait for the result to be available and fetch the result from a previous assignment or aggregation operation that may have been run asynchronously, in which case it is a one-shot call. When the assignment or aggregation operation was not asynchronous, the result is wrapped in the object and can be fetched mutliple times.

#### Usage

```
dsFetch(res)
```

## Arguments

res

An object inheriting from DSResult-class.

#### See Also

```
Other DSResult generics: DSResult-class, dsGetInfo()
```

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsAssignExpr(con, "C", as.symbol("c(1, 2, 3)"))
res <- dsAggregate(con, as.symbol("length(C)"))
length <- dsFetch(res)
dsDisconnect(con)
## End(Not run)</pre>
```

dsGetInfo 27

dsGetInfo

Get DataSHIELD-aware data repository metadata

#### Description

Get DataSHIELD-aware data repository metadata

## Usage

```
dsGetInfo(dsObj, ...)
```

## Arguments

dsObj An object inheriting from DSObject-class, i.e. DSDriver-class, DSConnection-class,

or a DSResult-class.

... Other arguments to methods.

#### Value

a named list

#### Implementation notes

For 'DSDriver' subclasses, this should include the version of the package ('driver.version') and the version of the underlying client library ('client.version').

For 'DSConnection' objects this should report the version of the data repository application ('repo.version') and its name ('repo.name'), the database name ('dbname'), username, ('username'), host ('host'), port ('port'), etc. It MAY also include any other arguments related to the connection (e.g., thread id, socket or TCP connection type). It MUST NOT include the password.

For 'DSResult' objects, this should include the R expression being executed ('expression') and if the query is complete ('has.completed').

#### See Also

```
Other DSDriver generics: DSDriver-class, dsConnect()
```

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()
```

Other DSResult generics: DSResult-class, dsFetch()

28 dsHasTable

dsHasResource

Check remote resource exists

#### Description

Check if a remote resource reference exists in the data repository. Returns a logical indicating the existence of a remote resource accessible through this connection.

## Usage

```
dsHasResource(conn, resource)
```

## Arguments

conn An object that inherits from DSConnection-class.

resource the resource fully qualified name

#### See Also

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()
```

## Examples

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsHasResource(con, "test.CNSIM")
dsDisconnect(con)
## End(Not run)</pre>
```

dsHasTable

Check remote table exists

## Description

Check if a remote table exists in the data repository. Returns a logical indicating the existence of a remote table accessible through this connection.

## Usage

```
dsHasTable(conn, table)
```

dsIsAsync 29

#### Arguments

conn An object that inherits from DSConnection-class.

table the table fully qualified name

#### See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()

#### Examples

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsHasTable(con, "test.CNSIM")
dsDisconnect(con)
## End(Not run)</pre>
```

dsIsAsync

Asynchronous result support

## Description

When a DSResult-class object is returned on aggregation or assignment operation, the raw result can be accessed asynchronously, allowing parallelization of DataSHIELD calls over multiple servers. The returned named list of logicals will specify if asynchronicity is supported for: aggregation operation ('aggregate'), table assignment operation ('assignTable'), resource assignment operation ('assignResource') and expression assignment operation ('assignExpr').

#### Usage

```
dsIsAsync(conn)
```

## Arguments

conn

An object that inherits from DSConnection-class.

#### See Also

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()
```

30 dsListMethods

## Examples

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsIsAsync(con)
dsDisconnect(con)
## End(Not run)</pre>
```

dsListMethods

Get the DataSHIELD methods

#### Description

Get the list of DataSHIELD methods that have been configured on the remote data repository.

## Usage

```
dsListMethods(conn, type = "aggregate")
```

## Arguments

conn An object that inherits from DSConnection-class.

type Type of the method: "aggregate" (default) or "assign".

## Value

A data.frame with columns: name, type ('aggregate' or 'assign'), class ('function' or 'script'), value, package, version.

#### See Also

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()
```

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsListMethods(con)
dsDisconnect(con)
## End(Not run)</pre>
```

dsListPackages 31

dsListPackages

Get the DataSHIELD packages

## Description

Get the list of DataSHIELD packages with their version, that have been configured on the remote data repository.

## Usage

```
dsListPackages(conn)
```

## Arguments

conn

An object that inherits from DSConnection-class.

#### Value

A data frame with columns: name, version.

#### See Also

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()
```

## Examples

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsListPackages(con)
dsDisconnect(con)
## End(Not run)</pre>
```

dsListResources

List remote resources

## Description

List remote resources from the data repository. Returns the unquoted names of remote resources accessible through this connection.

## Usage

```
dsListResources(conn)
```

32 dsListSymbols

#### Arguments

conn

An object that inherits from DSConnection-class.

#### See Also

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()
```

## Examples

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsListResources(con)
dsDisconnect(con)
## End(Not run)</pre>
```

dsListSymbols

List symbols

## Description

After assignments have been performed, some symbols live in the DataSHIELD R session on the server side.

## Usage

```
dsListSymbols(conn)
```

## Arguments

conn

An object that inherits from DSConnection-class.

#### See Also

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListResources(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()
```

dsListTables 33

#### Examples

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsAssignTable(con, "D", "test.CNSIM")
dsListSymbols(con)
dsDisconnect(con)
## End(Not run)</pre>
```

dsListTables

List remote tables

## Description

List remote tables from the data repository. Returns the unquoted names of remote tables accessible through this connection.

## Usage

```
dsListTables(conn)
```

## Arguments

conn

An object that inherits from DSConnection-class.

#### See Also

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()
```

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsListTables(con)
dsDisconnect(con)
## End(Not run)</pre>
```

34 DSLoginBuilder

dsListWorkspaces

Get the DataSHIELD workspaces

#### Description

Get the list of DataSHIELD workspaces, that have been saved on the remote data repository.

#### Usage

```
dsListWorkspaces(conn)
```

## Arguments

conn

An object that inherits from DSConnection-class.

#### Value

A data frame with columns: name, lastAccessDate, size.

#### See Also

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()
```

## Examples

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsListWorkspaces(con)
dsDisconnect(con)
## End(Not run)</pre>
```

DSLoginBuilder

DataSHIELD login details builder

## Description

DataSHIELD login details builder DataSHIELD login details builder

## Format

A R6 object of class DSLoginBuilder

DSLoginBuilder 35

#### Details

Helper class for creating a valid data frame that can be used to perform datashield.login. See also newDSLoginBuilder.

#### Methods

```
Public methods:
```

```
• DSLoginBuilder$new()
```

- DSLoginBuilder\$append()
- DSLoginBuilder\$build()
- DSLoginBuilder\$clone()

```
Method new(): Create a new DSLoginBuilder instance.
```

```
Usage:
DSLoginBuilder$new(logins = NULL, .silent = FALSE)
Arguments:
```

logins A valid login details data frame to initiate the builder, optional.

.silent Do not warn user when non secure HTTP urls are encountered. Default is FALSE.

Returns: A DSLoginBuilder object.

Method append(): Append login information for a specific server.

```
Usage:
DSLoginBuilder$append(
  server,
  url,
  table = "",
  resource = ""
  driver = "OpalDriver",
  user = "",
  password = "",
  token = "".
  options = ""
Arguments:
server The server name (must be unique).
url The url to connect to the server or a R symbol name.
table The table path that identifies the dataset in the server.
resource The resource path that identifies the resource reference in the server.
driver The DSDriver-class name to build the DSConnection-class.
user The user name in the user credentials.
password The user password in the user credentials.
token The personal access token (ignored when user credentials are not empty).
```

options Any options (R code to be parsed) that could be relevant for the DS connection object.

Method build(): Build the DSLoginBuilder instance.

Usage:

DSLoginBuilder\$build()

Returns: The DataSHIELD logindata data.frame

Method clone(): The objects of this class are cloneable with this method.

Usage.

DSLoginBuilder\$clone(deep = FALSE)

Arguments:

deep Whether to make a deep clone.

DSObject-class

 $DSObject\ class$ 

## Description

Base class for all other DataSHIELD classes (e.g., drivers, connections). This is a virtual Class: No objects may be created from it.

#### **Details**

More generally, DataSHIELD defines a very small set of classes and generics that allows users and applications perform meta-analysis with a common interface. The virtual classes are 'DSDriver' that individual drivers extend, 'DSConnection' that represent instances of DataSHIELD-aware data repository connections, and 'DSResult' that represent the result of a DataSHIELD operation. These three classes extend the basic class of 'DSObject', which serves as the root or parent of the class hierarchy.

#### Implementation notes

An implementation MUST provide methods for the following generics:

• dsGetInfo

It MAY also provide methods for:

• summary Print a concise description of the object. The default method invokes 'dsGet-Info(dsObj)' and prints the name-value pairs one per line. Individual implementations may tailor this appropriately.

## See Also

Other DS classes: DSConnection-class, DSDriver-class, DSResult-class

DSResult-class 37

#### Examples

```
## Not run:
drv <- DSOpal::Opal()
con <- dsConnect(drv, "username", "password", "https://opal.example.org")
rs <- dsAssign(con, "Project.TableA")
is(drv, "DSObject") ## True
is(con, "DSObject") ## True
is(rs, "DSObject") ## True
dsDisconnect(con)
## End(Not run)</pre>
```

DSResult-class

 $DSResult\ class$ 

## Description

This virtual class describes the result and state of execution of a DataSHIELD request (aggregation or assignment).

## Implementation notes

Individual drivers are free to allow single or multiple active results per connection.

The default show method displays a summary of the query using other DS generics.

## See Also

```
Other DS classes: DSConnection-class, DSDriver-class, DSObject-class
Other DSResult generics: dsFetch(), dsGetInfo()
```

dsRmSymbol

Remove a symbol

## Description

After removal, the data identified by the symbol will not be accessible in the DataSHIELD R session on the server side.

## Usage

```
dsRmSymbol(conn, symbol)
```

dsRmWorkspace

#### Arguments

conn An object that inherits from DSConnection-class.

symbol Name of the R symbol.

#### See Also

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmWorkspace(), dsSaveWorkspace()
```

## Examples

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsAssignTable(con, "D", "test.CNSIM")
dsRmSymbol(con, "D")
dsDisconnect(con)
## End(Not run)</pre>
```

dsRmWorkspace

Remove a DataSHIELD workspace

## Description

Remove a DataSHIELD workspace from the remote data repository. Ignore if no such workspace exists.

## Usage

```
dsRmWorkspace(conn, name)
```

#### Arguments

conn An object that inherits from DSConnection-class.

name Name of the workspace

## See Also

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsSaveWorkspace()
```

dsSaveWorkspace 39

#### Examples

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsSaveWorkspace(con, "foo")
dsListWorkspaces(con)
dsRmWorkspace(con, "foo")
dsListWorkspaces(con)
dsDisconnect(con)
## End(Not run)</pre>
```

dsSaveWorkspace

Save the DataSHIELD R session in a workspace

## Description

Save the DataSHIELD R session in a workspace on the remote data repository.

## Usage

```
dsSaveWorkspace(conn, name)
```

#### Arguments

conn An object that inherits from DSConnection-class.

name Name of the workspace

#### See Also

```
Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace()
```

```
## Not run:
con <- dbConnect(DSOpal::Opal(), "server1",
    "username", "password", "https://opal.example.org")
dsSaveWorkspace(con, "foo")
dsListWorkspaces(con)
dsDisconnect(con)
## End(Not run)</pre>
```

newDSLoginBuilder

newDSLoginBuilder

Create a new DataSHIELD login details builder

## Description

Shortcut function to create a new DSLoginBuilder instance. The data frame that is being built can be used to perform datashield.login.

## Usage

```
newDSLoginBuilder(logins = NULL, .silent = FALSE)
```

## Arguments

logins A valid login details data frame to initiate the builder, optional.

.silent Do not warn user when non secure HTTP urls are encountered. Default

is FALSE.

```
{
  builder <- newDSLoginBuilder()
  builder$append(server="server1", url="https://opal-demo.obiba.org", table="datashield.CNSIM1",
      user="administrator", password")
  builder$append(server="server2", url="dslite.server", table="CNSIM2")
  builder$append(server="server3", url="http://molgenis.example.org", table="CNSIM3",
      token="123456789")
  builder$append(server="server4", url="dslite.server", table="CNSIM4")
  logindata <- builder$build()
}</pre>
```
